DETAILED ACTION

1. Receipt of the papers filed on November 29, 204, is acknowledged. New claims 45 and 46 have been presented. Claims 29-31, 45 and 46 are pending.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claim 31 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 1 of U.S. Patent No. 5,744,015. Although the conflicting claims are not identical, they are not patentably distinct from each other because the scope of the claims overlaps. Applicant's request for the opportunity to submit a terminal disclaimer in section III of the Remarks is noted.

Art Unit: 1742

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 5. Claims 29, 30, 45 and 46 are rejected under 35 U.S.C. 102(e) as being anticipated by Matsumoto (4,742,038), newly cited.
- 6. The Matsumoto patent is directed to a catalyst support and catalyst. A monolithic catalyst support for use in the purification of exhaust gases comprises a metal substrate, an oxide membrane formed on the surface of the substrate, and an active alumina layer formed on the oxide membrane. See the abstract. When alkaline earth metals, alkali metals, and lanthanoid (lanthanide) elements are simultaneously incorporated into the support substrate, a perovskite type composite oxide membrane represented by the formula $R_xLn_{1-x}AlO_3$, where R is Ca, Sr, Ba, Ra, K Rb, Cs, Fr and Ln is a lanthanoid element is formed. Upon forming the perovskite type composite oxide, a preferred molar ratio between R and Ln is R/Ln=0.1~10.0. See column 3, lines 33-65. In example 9, the alkali metal is Sr and the lanthanoid is Sm. The corresponding oxide membrane meets the limitations of

Application/Control Number: 10/010,121 Page 4

Art Unit: 1742

claims 29 and 46. Lanthanum is an element of the Lanthanoid series, meeting the

limitation of claims 30 and 46.

Any inquiry concerning this communication or earlier communications from

the examiner should be directed to William T. Leader whose telephone number is

571-272-1245. The examiner can normally be reached on Mondays-Thursdays and

alternate Fridays, 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Roy King, can be reached on 571-272-1244. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR

only. For more information about the PAIR system, see http://pair-direct.uspto.gov.

Should you have questions on access to the Private PAIR system, contact the

Electronic Business Center (EBC) at 866-217-9197 (toll-free).
